Why we want you to review your current defibrillator status?

Croi na Féile

The Cormac Trusts Objective is to increase awareness and save lives. Having a defibrillator in place is a first and important step. However it is critically important we work to achieve 'being able to act in an emergency'.

This is why we must review the following:

1. Is your defibrillator on display?

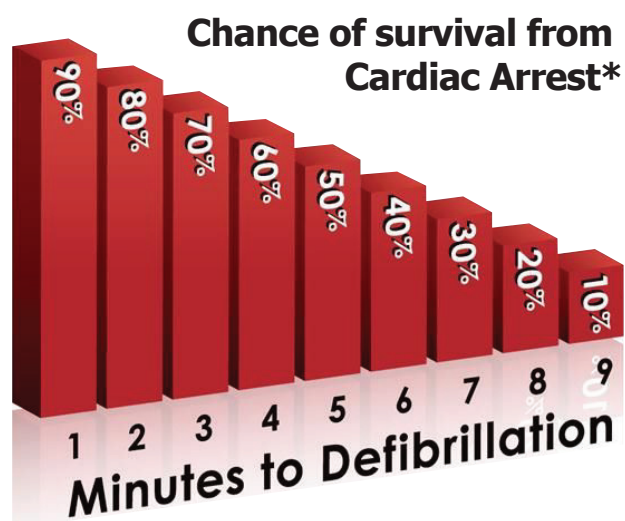

Is your defibrillator on display and do members know how to access it?

2. Defibrillator Maintenance Check

Have you implemented an effective maintenance check program? Is the flashing light working? Are the battery and pads present?

3. CPR & AED Training

Do you have ten volunteers with current training capable of administering emergency care?
